ABOUT TOLLEGNO 1900

Positioned against the most important players of Italian spinning mills, Tollegno 1900 has over time become synonymous with high quality finished products.

The company today is a highly structured organization that integrates all the steps in the chain from the spinning of yarn through to finished product garments. With over 800 employees, Tollegno 1900 spins over four million kilos of yarn each year.

Represented through direct sales offices in New York, Hong Kong, Shanghai, Osaka.

The company is deeply connected to the centuries-old manufacturing traditions of Biella and is constantly engaged in maintaining a correct balance with territorial environment.

Tradition and innovation come together perfectly in the work carried out by Tollegno 1900.

Full respect for its neighbours and the environment is guaranteed by using the most advanced technology available and most modern processes in manufacturing.

The spinning mill uses hydropower from two on-site turbines. Tollegno 1900 is committed to purifying all the water supply in the production process.

Between 2009 and 2011, Tollegno 1900 adopted an area of 23.100 square meters of a photovoltaic system.

At the same time in the plant traditional lightning was replaced with led lamps, saving noticeable amount of energy.

Deeply rooted in the Biella region, the company is now one of the few completely integrated mills, overseeing the entire production process from breeding sheep to the dyeing, weaving and finishing. With the objective of constant and original product development, Tollegno 1900 has created a research laboratory dedicated to keep the fabrics and yarn divisions innovative.

As such Tollegno 1900 gave life to a new business unit, which is both functional and experimental.

Our mission - will be and has always been - to export the Italian textile tradition from Biella all over the world with an excellent product.
